

### **Milestone 3**

#### **Group 1**

Our completed features for the demonstration was the website's homepage and the html form page to add a new group. The homepage and the nav bar worked as expected to effectively navigate all the areas of our site. The add a group form also worked fine, as far as the front end goes. Our main issue that we faced was a lack of experience in terms of back-end server management. Due to the chaos of the last couple weeks, most of our group had yet to complete Lab 7 and had little or no experience working with nodeJS. As a result, our demo was front-end heavy and we did not have sufficient development as far as our server or database was concerned. Our TA mentioned as much, and recommended that we focus our attention on the back-end for a while. In addition, Shravan also pointed out that we should put in a bit more time than our normal meeting schedule for the next week or two in order to catch up on the back-end work.
